PRODUCT BROCHURE

your partner in chat.

Introducing solutions for Community Managers to have an easy and deep interaction with users while having the right data that can help further grow your Telegram community!

We, [AQOOM](#), have met blockchain users and corporate officials to further understand how Community Managers work and we created solutions to make their tasks easier and more productive. Having a growth and user-focused platform, Community Managers will have the right tools in producing data for future marketing purposes while never missing a time to interact with users.

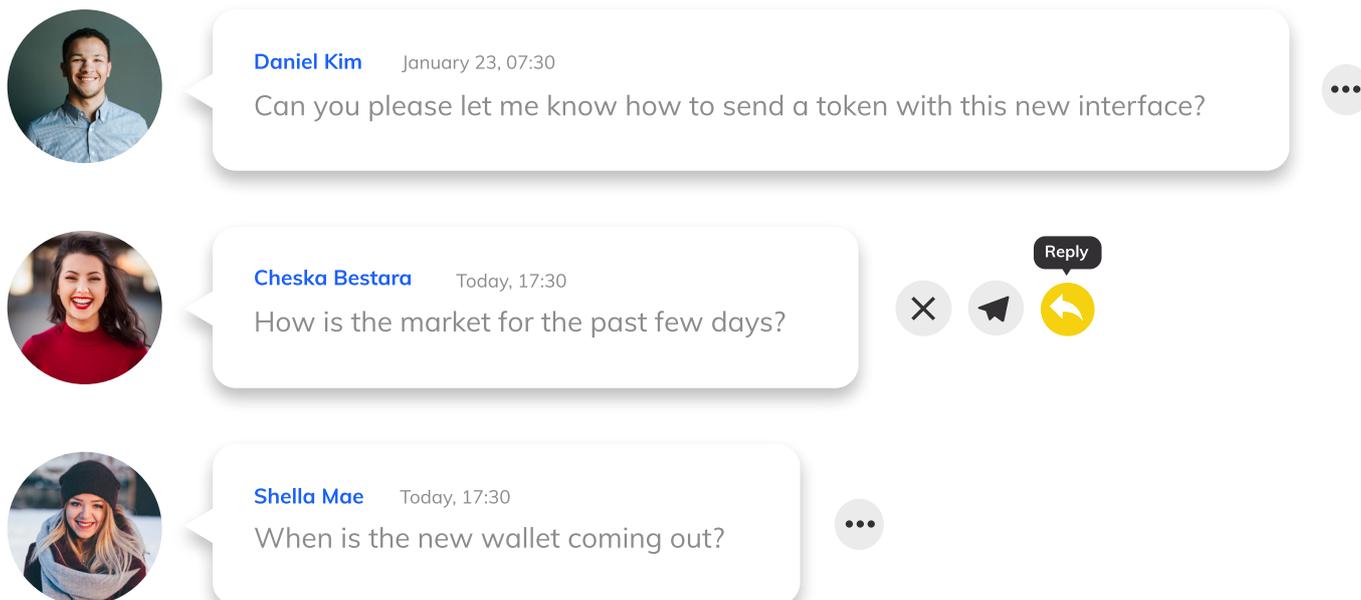

We aim to help blockchain companies to operate and manage Telegram chat groups more quickly and efficiently through [AQOOM Chatbot](#).

[AQOOM Chatbot](#) is a customizable omni channel bot and assistant platform for blockchain enterprises and it helps to create a safe and better environment for user-investor interaction and communication.

just the right features.

We collected all the features that you need for your growing Telegram community. These features can help you to have the right tools managing and moderating your groups.

We focused on three major points which are interaction, moderation, and analytics.

interaction

Interacting with your users has never been this easy. With an all-in-one interface where you can directly reply to questions, answer queries, or just reply to different kind of messages, you'll never miss an opportunity to indulge in to a conversation. You can also directly ban, kick, or delete a message in the same message log. You can also set different announcements for different times and dates.

Collected Questions

All the questions posted in the chatroom will be in one message log. The community manager can directly answer these questions via direct message or replying to the group. Through this feature, Community Manager will never miss an opportunity to answer important questions.

Messages Directed to Admins

Messages that has 'admin' word to it will be in one message log. It will be easier for Community Managers to see all the questions, inquiries, and messages that are directed to admins. The Community Manager can directly reply to these messages, ban, kick, or restrict the users, or message them on a direct message.

Scheduled Announcements

Community Managers can now set announcements or messages ahead of time. These messages could be recurring by minutes, hours, days, weeks and even by month. Community Managers will always be sure to send the right announcements and reminders at the right time.

Welcome Messages

Community Managers can now set a welcome message everytime a user joins in the group. Through this feature, Community Managers can start interacting with the new members and can also add a links to website, faqs, or even just a simple message to start interacting with new members.

moderation

From basic to advanced filters, you know that there's no message that is going to be out of control. You have full control over on what are allowed and restricted in your chat group. And with the Warning Points System, you have an option to send warnings, ban, or kick a member who accumulated a certain amount of points. And even if you have not turned on a filter, you'll be notified on what is on and what you could be changed.

Anti-Spam

This feature automatically detects other bots and spams. By selecting different filters and restrictions, Community Managers have the control to which words to ban and what URLs and Bots are allowed in the group. Managers can also set restrictions to new members from sending a message within a certain time-frame. This can prevent spammers from sending advertisements and spams and then leaving the room.

Filters

Filters that ranges from restricting different kinds of messages, Community Managers are sure that the room are free abusive words and sentences. These kinds of messages are automatically detected and deleted from the chatroom. This feature is the easiest way to manage contents and posts in your chat room. This features serves as a cleaner to maintain the credibility of your chat room.

Warning Points System

Members accumulate warning points whenever they send a restricted message. As these points are accumulated, the Community Manager has the option what to do with these users. They can directly ban, kick, or restrict a member from sending a message for a certain period of time. Through this feature, you can keep track which users are causing trouble in your community.

Activity Notification

On the Message Log, you can see messages that are potential spams or users that has already accumulated a huge amount of warning points. Community Managers will have an option to take immediate action to turn on a filter as needed or keep it off, delete the message, send a warning to the sender, or just directly kick and ban the user.

data and analytics

We provide the right data for your Community Managers to gain insights about your users to strategize and formulate your new next event or promotion! You can also receive reports whenever you want it, no reminders needed! In addition to that you'll know how much is your bot performing in your Telegram groups. So you'll know if you need to be more lenient or if you just have just the right restrictions.

User Data Insights

Gaining user data can now be accessed through a profile page. Community Managers can now follow and track user activities like active hours, types of messages being sent by a certain user and also how many messages a user is sending per day. Through these data, Community Managers can gain insights about each and every user of your community, active or not.

Scheduled Reports

Community Managers can receive reports regarding their community at the right time. These scheduled reports can be the key in an effective marketing strategy as these can be used with the Marketing Team and plan the next event and promotions.

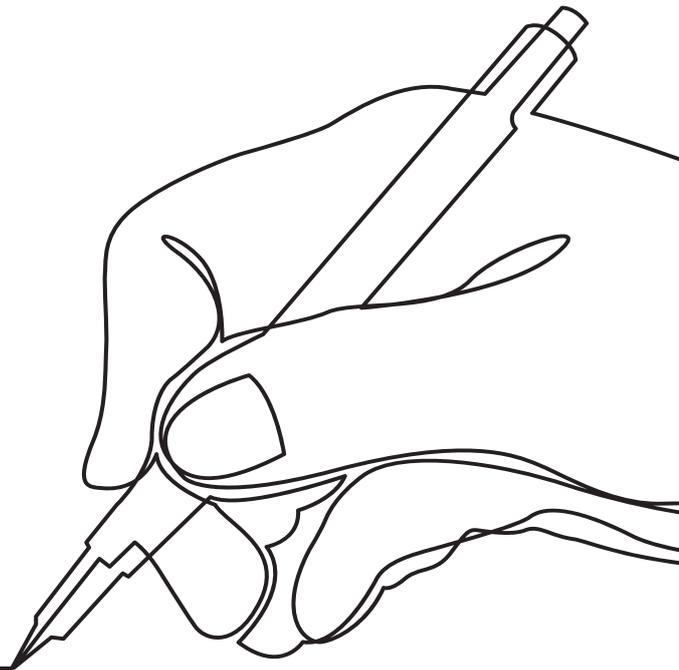

Bot Performance

This feature lets the Community Manager know how the bot is performing. It can show how many messages are being processed, how many members are being kicked by the bot, and how many messages are being deleted. Through this, Community Managers can decide if the restrictions are too strict or to make it more lenient.

Community Reports

Community Managers can now keep track how the Telegram community is growing. With data about how many users are joining, leaving, and are inactive, Community Managers can think of ways how to keep the community growing.

be part of our growth.

As we are in BETA version, the features of our service are currently limited, but we are confident that it will provide a better experience for chat group managers in operating your company's Telegram community.

AQOOM Chatbot have great plans to expand and add more features in the future that would help and provide helpful information how to manage your Telegram community more efficiently.

We would appreciate to receive your comments and suggestions regarding our service and if you have any problems, you can reach us via info@aqoom.com. We would also like to know the features that you would want to see in our future versions.
